Embed

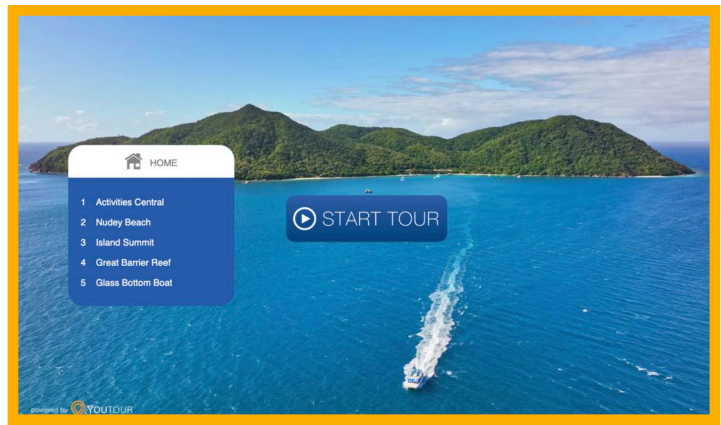

YouTour does support iFrame embedding. Please see below:

<iframe width="100%" height="100%" src=https://cbhharvest.youtour.com.au/agentframe frameborder="0" allow="autoplay; encrypted-media; gyroscope; picture-in-picture; " allowfullscreen></iframe>

Change the Width and Height to a more specific size by modifying: iframe width="100%" height="100%" to be iframe width="800px" height="600px"

There are three different types of iFrame integration, here are some examples:
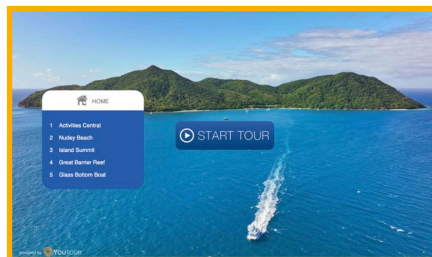

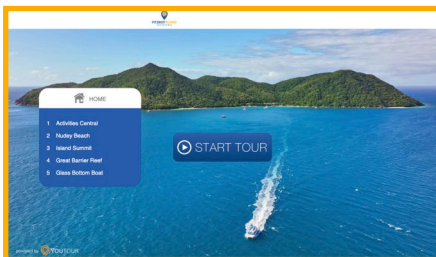

Standard:	Top Bar Off:	(Popular) Top Bar & Side Bar Off:
https://ccia.youtour.com.au/#campus	https://ccia.youtour.com.au/frame#campus	https://ccia.youtour.com.au/agentframe#campus
Change = no change	Change = /frame to the url	Change = /agentframe to the url

Deeplinking: You can also directly link to any part of your YouTour from any part of your website. So if you have specific location in your YouTour you want to link to, just put the number from the left hand column after the tour name.

For example: If you want to link to Location 3 in your YouTour with the iFrame interface activated you would put a _3 after the #uqstlucia like this: https://uq.youtour.com.au/agentframe#uqstlucia_3

Please contact: support@youtour.com.au if you have any questions.
